Hannibal Clinic Ads Stereotactic Breast Biopsy Technology

**For Immediate Release*

Hannibal, Missouri - Hannibal Clinic continues to advance women's health services. Hannibal Clinic has secured the latest technology in breast biopsy. In April, Hannibal Clinic will install a Brevera® Breast Biopsy system with CorLumina® imaging technology. This stereotactic breast biopsy table allows for a shorter procedure with less time under compression, and real time core imaging. This addition in technology is a continuation of the long standing dedication Hannibal Clinic physicians hold towards continuously improving women's healthcare in the region.

In 2016, Hannibal Clinic surgeons, Dr. Aphrodite Henderson, Dr. Patricia Hirner, and Dr. Melissa Matrisch became Hidden Scar Trained Surgeons for Hidden Scar™ Breast Cancer Surgery. This progressive approach to breast cancer surgery hides scars, minimizing the daily emotional reminder of a breast cancer diagnosis. This cutting edge advancement expands options for women in the Hannibal region with a procedure that effectively treats the cancer while optimizing cosmetic results.

Additionally, Hannibal Clinic remains the only imaging facility within a 90 mile radius to hold the American College of Radiology distinction of 'Breast Imaging Center of Excellence'. The ACR gold seal of accreditation represents the highest level of image quality and patient safety.

###

Hannibal Clinic is a premier multi-specialty medical practice providing excellent healthcare to the residents of Northeast Missouri for over 60 years. Hannibal Clinic has locations in Hannibal, Palmyra, Monroe City, Center, and Bowling Green with 50 providers on staff in 18 different medical specialties.
